- Print bill to customer.

IPO & PAC Chart

INPUT	PROCESS	OUTPUT
Take Quantity	- Add items	- Print bill to customer
discount (%)	- terminate invalid values $\rightarrow < \text{zero}$	-
	- Calculate bill	-

Pseudocode

total $\leftarrow$ 0

INPUT "Enter quantity of items", i

FOR j = 0 TO (i - 1)

Repeat

INPUT "Enter item price", Prices[i]

IF Prices[i] < 0 THEN

OUTPUT "Incorrect enter again"

ENDIF

UNTIL Prices[i] $\geq$ 0

~~Repeat~~

INPUT "Enter quantity of item", Q

total ~~++~~ = total + (Price[i] * Q)

INPUT "Enter discount (%)", tax d

dt = total - (total * ~~tax~~ / 100)

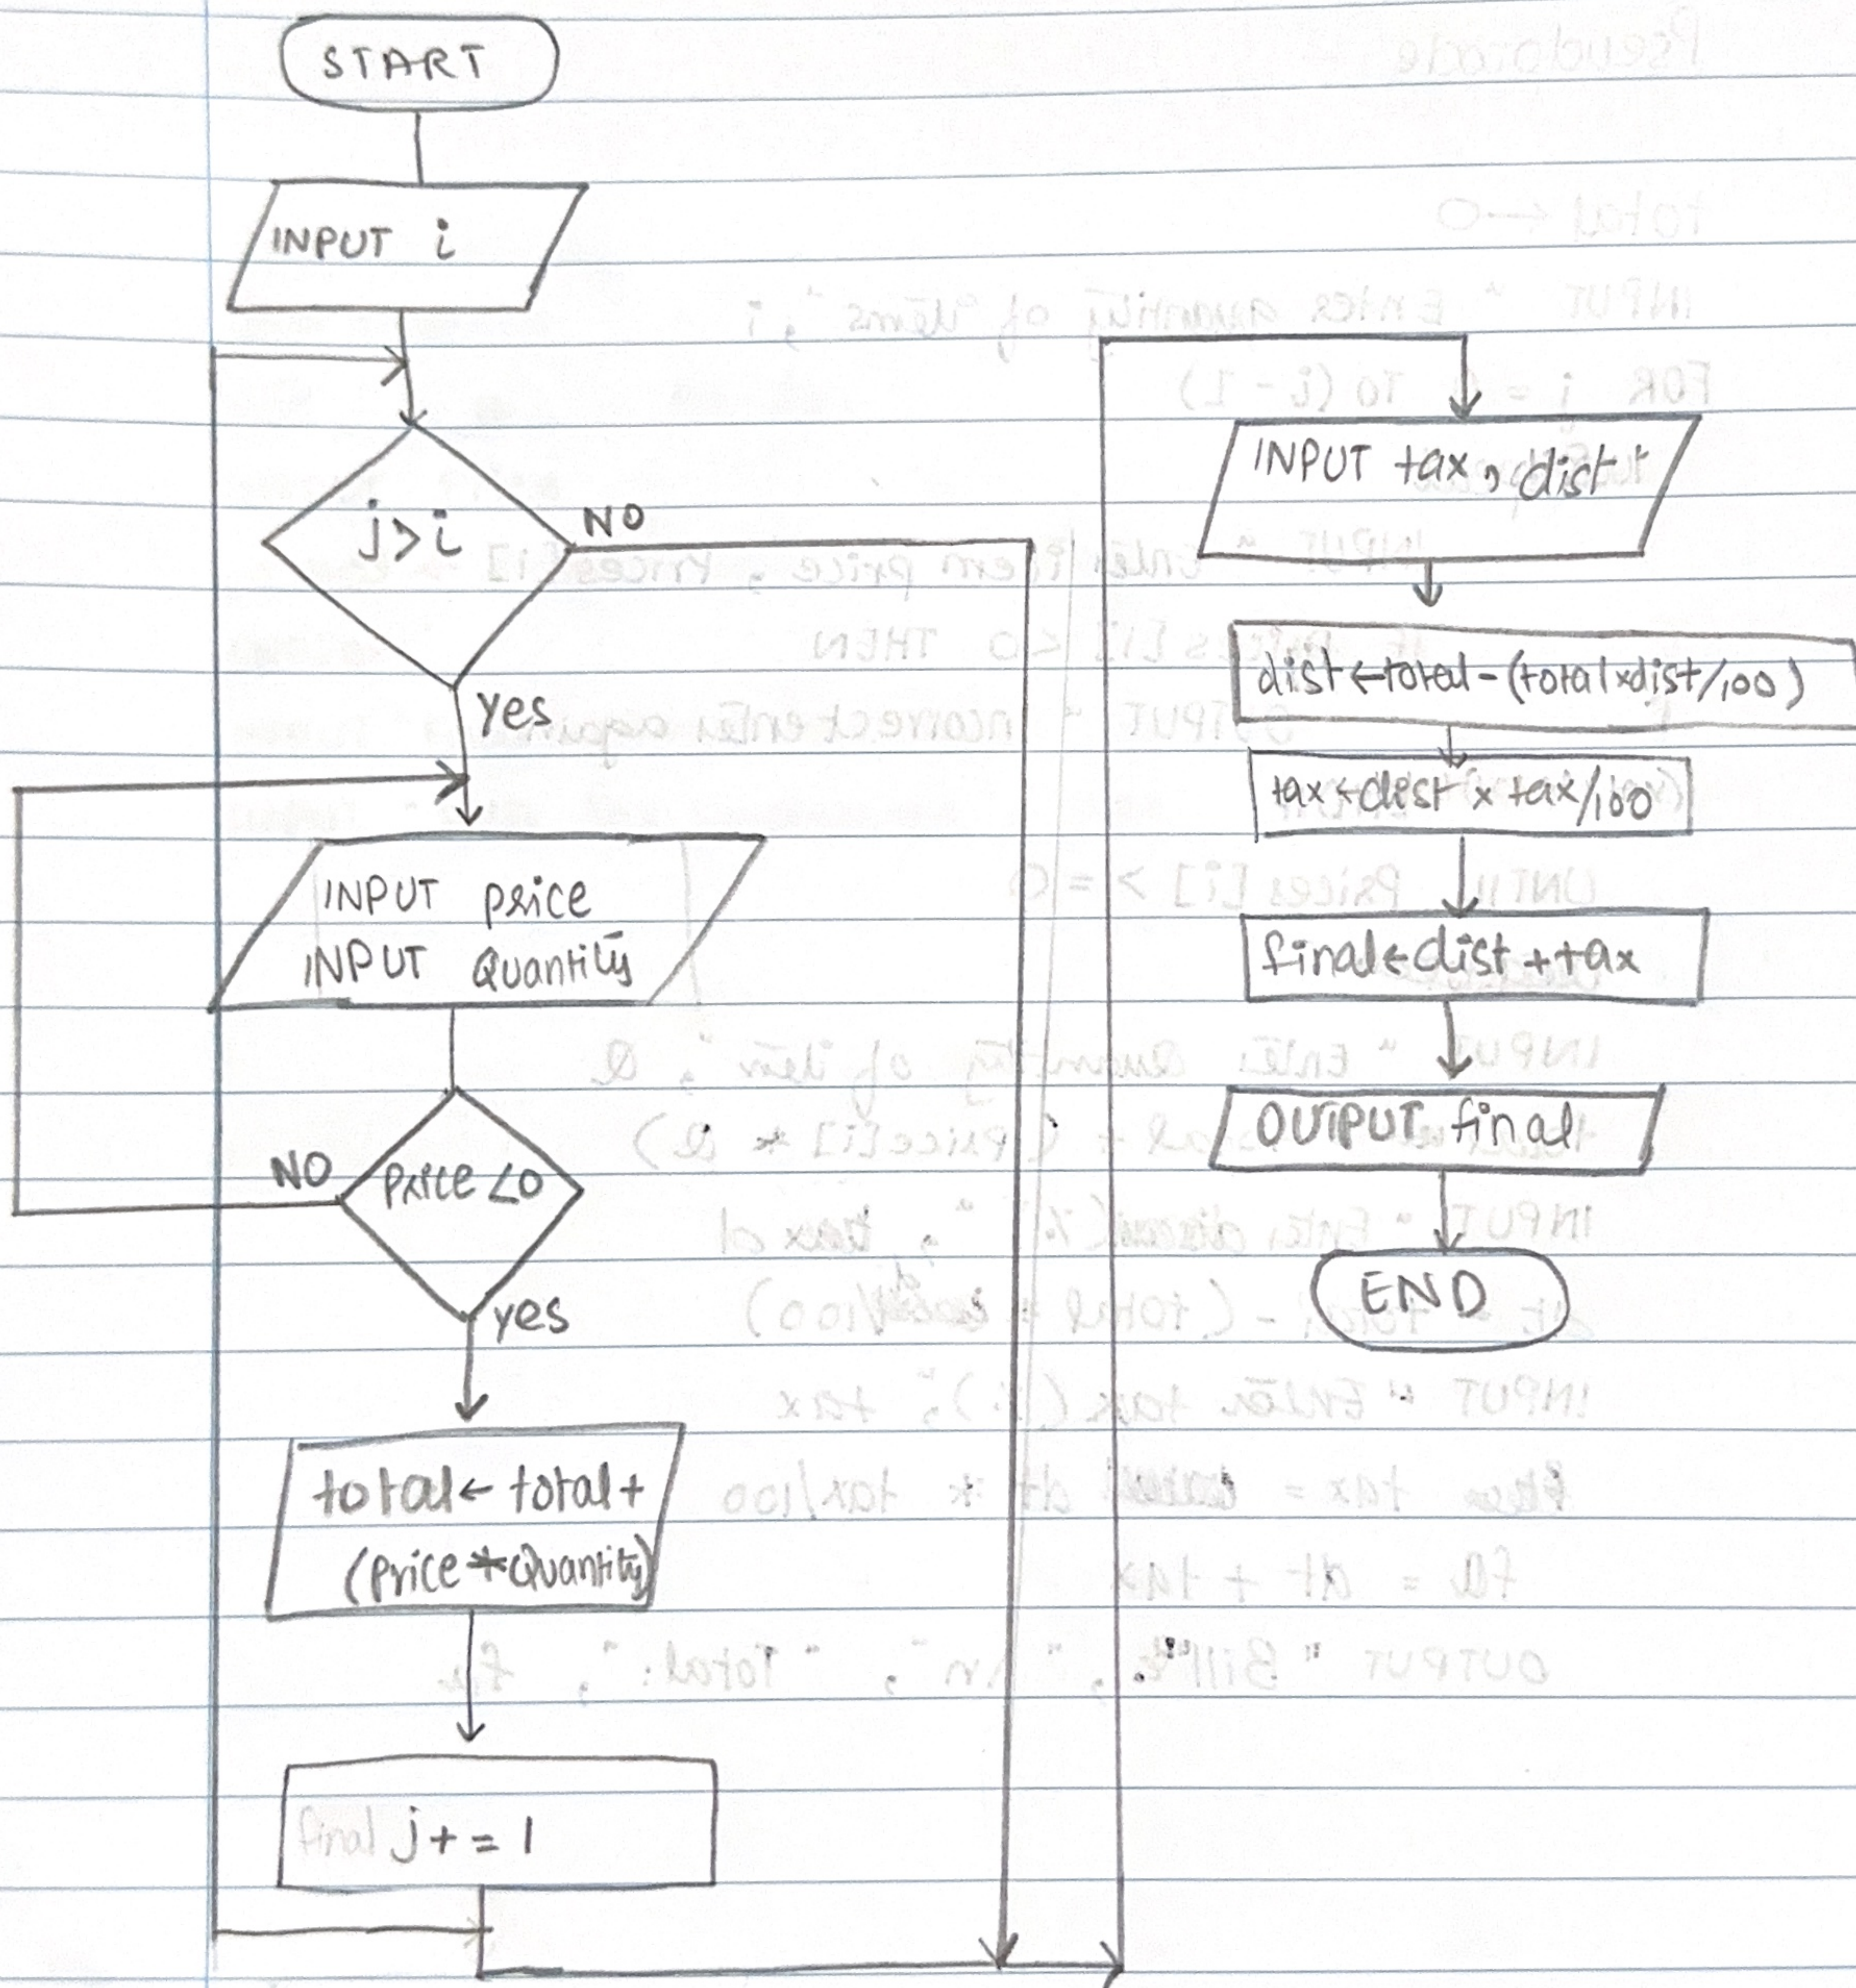

INPUT "Enter tax (%)", tax

~~tax~~ tax = ~~total~~ dt * tax / 100

fa = dt + tax

OUTPUT "Bill", "\n", "Total:", fa

Date: _____
